

OPEN SOURCE SOFTWARE LICENSE AND ABSOLUTE RIGHTS ENFORCEMENT AGREEMENT

Comprehensive Regulatory Framework for Source Code Engagement, Utilization, and Modification via GitHub (English Version)

PREAMBLE AND CORE REGULATORY MANIFESTO

This Open Source Software License Agreement and Intellectual Property Protection Covenant (hereinafter referred to as the "Agreement") is formally, legitimately, and comprehensively instituted to serve as a binding statutory framework governing all computing architectures, including but not limited to raw source codes, script files, functional sub-routines, processing algorithms, data configuration matrices, object class layout architectures, code dependency mappings, formatting parameters, and all adjacent technical manuals or installation deployment documentation hosted, published, or dynamically exhibited within any repository asset ecosystem (regardless of its status as a public or private repository) controlled on the global GitHub version control platform.

All the aforementioned electronic assets, script structures, and computational frameworks have been uniquely engineered, structurally optimized, and are lawfully owned under exclusive copyright titles by the creator operating under the unique technical alias and digital identity **W4RYG** (hereinafter referred to as the "Rightsholder"). The explicit underlying purpose of provisioning this technical package is to advance open computational collaboration and empower independent developers, software engineers, academic research consortiums, system administrators, and corporate entities (hereinafter referred to as the "Licensee" or "Everyone") to inspect, evaluate, and integrate these technical systems under open-source methodologies.

Any interactive engagement with the software repository, including but not limited to accessing the repository interfaces, initiating data forks (Forking), cloning the functional repository arrays via Git command interfaces (Cloning), downloading the compressed script archives (Downloading), integrating components into peripheral systems, initializing local software compilation, or executing the runtime environment via interpreters or compilers, shall legally manifest absolute, permanent, and irrevocable consent to be bound by every term, condition, and statutory boundary contained herein without exception. If you do not accept these terms, all rights are nullified.

SECTION 1. DEFINITIONS AND INTERNATIONAL SCOPE OF INTELLECTUAL PROPERTY TITLES

The term "Open Source Script and Source Code Assets" within the boundaries of this Agreement encompasses the totality of programming syntax, logic layouts, operational subroutines, configuration files, and technical modules compiled within this digital project repository. The deliberate disclosure of these code assets on the GitHub platform is aimed strictly at enhancing system transparency, architectural verification, and pedagogical evolution within the global engineering community; it shall under no circumstances be construed as an implicit or explicit waiver of copyright or a dedication of the codebase to the public domain (Public Domain).

The Rightsholder **W4RYG** expressly, fully, and unyieldingly retains all exclusive intellectual property titles over this software ecosystem. This protection operates globally and is instantly activated upon syntax formulation, extending over core functional layers, subroutines, variable declarations, custom interfaces, conceptual algorithms, and creative titles across all sovereign jurisdictions pursuant to the Berne Convention and prevailing copyright acts.

SECTION 2. BOUNDARIES OF THE LICENSE AND REVENUE-FREE FREEDOMS GRANTED TO EVERYONE

Conditioned upon absolute and continuous compliance with all terms, restrictions, and explicit prohibitions set forth in this Agreement, the Rightsholder hereby grants to Everyone a non-exclusive, non-transferable, worldwide, royalty-free license to utilize the software within the following rigidly defined functional boundaries:

- **Right to Investigate, Analyze, and Execute:** Permitted to compile, deploy, execute, and monitor the internal code mechanics of the source code assets within isolated testing environments, private local servers, or sandbox frameworks exclusively for programming literacy, structural experimentation, academic research, and engineering optimization targets.
- **Right to Modify and Adapt Codebases (Modification):** Permitted to alter, expand, adjust, insert custom class routines, or delete legacy syntax lines to optimize software performance or integrate the functional modules into non-public internal software pipelines for personal convenience and private testing workflows.
- **Right to Redistribute within Identical Structural Mandates (Redistribution):** Permitted to transmit, publish, share, or redistribute the original software packages or modified variations thereof via the GitHub network, provided that this exact license documentation and ownership manifest files are included completely unaltered within all forwarded software distributions.

SECTION 3. STATUTORY RESTRICTIONS AND MANDATORY PROHIBITIONS TO PRESERVE TITLE INTEGRITY

To preserve the core mission of open collaborative engineering and fully insulate the creator from exploitative, unfair, or unauthorized commercial operations, the Rightsholder establishes the following absolute legal boundaries. Any violation immediately invalidates all granted permissions and constitutes a malicious tortious breach:

- **Absolute Commercial Monetization Prohibitions (Non-Commercial Restraint):** Everyone is strictly prohibited from utilizing this script package, its structural logic gates, processing modules, or cloned versions for commercial sale, commercial licensing models, subscription-based service setups, fee-charging software deployment architectures (SaaS), paid technical consulting wrappers, or any revenue-generating ventures, unless a separate, explicit commercial permit is executed and signed in writing by **W4RYG**.
- **Anti-Stripping Credit Protections (File Header Integrity):** It is an absolute violation of this Agreement to delete, obscure, strip, or alter file headers, creator credit lines, unique alias strings, unique identifier numbers, Discord contact links, or copyright statements from the source code layers. This restriction applies unconditionally, even if the primary code arrays have been modified, adjusted, or rewritten up to ninety percent of their physical volume.

SECTION 4. ABSOLUTE WARRANTY DISCLAIMER AND INDEMNIFICATION DECLARATION

Everyone interacting with this software asset framework acknowledges and explicitly consents that the open-source code packages are delivered strictly on an "**AS IS**" basis, in accordance with their current architectural and developmental state. The Rightsholder disclaims all warranties of any kind, whether express, statutory, or implied, including but not limited to warranties of continuous operation, merchantability, fitness for specialized algorithmic functions, or that the files are entirely free from hidden code bugs, security flaws, data anomalies, or fatal execution blocks.

The Rightsholder **W4RYG** shall under no circumstances be held responsible, liable, or accountable for any operational costs, losses, data destructions, or system damages, including direct, indirect, incidental, special, punitive, or consequential damages arising out of the installation, compilation, execution, modification, or redistribution of this software pack. This includes database corruption, hardware failures, network interruptions, or revenue losses. Everyone assumes all engineering risks and computational responsibilities personally.

SECTION 5. LICENSE INFRACTION, AUTOMATIC TERMINATION PROTOCOLS, AND REMEDIAL ACTION

This License Agreement remains fully active and legally binding throughout the entire duration that the user retains, interacts with, or deploys any part of the source script code. Any deviation from the terms, omissions, or unauthorized deployments results in the immediate, automatic, and retroactive termination of this license (Automatic Termination) with respect to that individual or collective entity without any prior warning or legal notice required from the creator.

Upon termination, the breaching entity is legally required to halt all software deployments, purge the source files from all physical or digital servers, and dismantle any cloned or hosted environments built upon the GitHub framework. The Rightsholder **W4RYG** reserves the absolute right to pursue all civil, criminal, and administrative legal pathways under global copyright and cybersecurity statutes to obtain full compensation, statutory damages, and injunctive relief.

SECTION 6. GOVERNING LAW, LITIGATION VENUES, AND SEVERABILITY APPARATUS

This Agreement shall be construed, governed, and enforced in strict accordance with international copyright laws and applicable intellectual property protocols. Any legal actions or litigation arising from this codebase shall be brought exclusively before the courts of competent jurisdiction covering the primary residence of the Rightsholder. If any clause, sentence, or subsection of this covenant is declared invalid, illegal, or unenforceable by an authorized court, that specific section shall be severed, and all remaining provisions shall continue in full force and effect.

SECTION 7. AGREEMENT ENTIRETY AND PLATFORM-SPECIFIC FUTURE REVISIONS

This document represents the entire, absolute, and finalized understanding between the Rightsholder and Everyone regarding the software assets within this repository. The Rightsholder **W4RYG** retains the sole authority to modify, append, or publish newer license iterations (such as V3.0) on the GitHub repository to address technological evolutions, and users are strictly required to adapt to the most current version distributed within the package.

CONCLUSION OF COVENANT AND MUTUAL AFFIRMATION

To demonstrate full agreement, mutual alignment, and compliance with the core mission of protecting creative engineering outputs within a fair open-source ecosystem, everyone accepts these conditions upon executing any Fork, Clone, or code retrieval operations from this repository.
